

Energy Conservation and Sustainability Presentation
to the City Commission and Staff
by Citizens for Clean Energy
April 16th, 2019 Commission Work Session

Citizens for Clean Energy (CCE) is an all volunteer group of Montana citizens from many backgrounds and political persuasions. CCE has been active in the community to promote adequate, clean, efficient and cost effective energy without destroying our health, lifestyle, environment and heritage. CCE sponsors awards every year for middle school and high school students demonstrating these principals at the Region II Science Fair each spring, and has donated funds to the Ice Plex to help replace lighting with LED fixtures. Our objective is to promote and assist the city in working to create a more sustainable, resilient community. A big step has been taken already by the Planning & Community Development Department and it's director, Craig Raymond, by having a study completed by McKinstry Engineering that includes energy savings.

Shannon Wilson - Conservation and Sustainability and what it means for the City of Great Falls

Ken Thornton - Clean energy and solar projects

Ken Palisin - City planning, funding, available grants
