**Great Falls Area
Long Range Transportation Plan Update
REQUEST FOR PROPOSALS**

ADDENDUM #1

October 25, 2022

Great Falls ***MPO***

ADDENDUM 1

Intersection LOS Analysis

The Consultant will perform LOS Analyses on all signalized intersections within the Study Area, as well as up to 10 additional intersections. Responding firms are requested to include the fee for studying all 90 signalized and 10 unsignalized intersections in its Proposal. Consultant will also provide a cost-per-intersection (signalized and unsignalized, separately) with its Proposal. If an intersection has been studied in the past three years by a qualified consultant, the City or State, the results from that study may be used for LOS calculations and the fee for any such intersection will be deducted from the consultant's fee. Additional unsignalized intersections above the 10 stated above, if identified for study through the plan development process, will be added to the consultant's fee.

Because of the lateness of this Addendum, consultants may be afforded additional time (up to four days after contact from the MPO) to provide the above information after submittal of the Proposal and after direct contact from the MPO.
